

# Lumafix Fixings

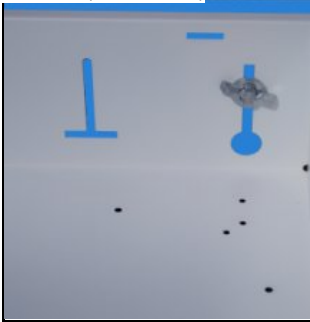

Lumafix is a trade name and is an ingeniously devised side arm suspension support bracket for very easy installation. This is most suitable for fittings that need to be drawn up to the ceiling for either resting on top of the "T" bar (for exposed grid ceilings) or for support to the sides on plasterboard ceilings.

Currently we are undergoing manufacturing changes to incorporate punchings for these fixings with our ranges. At the moment the recessed Jupiter ranges have been modified and in future other ranges will be modified. Please enquire on any other ranges.

Normally 4 brackets are used to support each fitting and these are available to order from us as a set.
